From Ethernet connection to 125 A 3-phase Motors

Connectivity solutions needs various requirements:

- high-frequency low current for BUS or Ethernet connections
- low voltage with rated current up to 16 A
- rated voltage from 250 V to 750 V and rated current up to 125 A

These are only the most visible differences in product design.

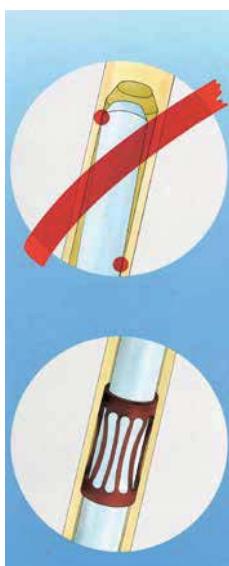

Even more requirements have been taken into account while designing and manufacturing connectivity products for use in hazardous areas.

Chemical resistance as well as mechanical strength – thermal behaviour and extended lifetime – products with the trade mark „CEAG“ will adhere to this challenges. Product families like **eXLink®**, **Ex-Therm** and **plugs & receptacles GHG 5...** will serve most of the upcoming market requirements.

Crouse-Hinds Series: Always a reliable contact

The principal feature is the pin and sleeve contact point. It determines the overall quality of the plug and receptacle system; special designed contacts mean low insertion and withdrawal forces, reliable contact-making, low transition resistances and low thermal loads. The explosion protection stands and falls with these features.

The self-cleaning Ex-e multi-contact

The self-cleaning Ex-e multicontact connections are made of louver-like punched and specially treated copper beryllium band. A large number of contact points ensure a perfect and durable electrical connection with low insertion and withdrawal forces – and this has been the case for decades, since this kind of contact technique has been standard at CEAG products since 1985.

Corrosion, no thank you!

Electrical equipment in the offshore area is often strongly attacked by aggressive chemicals or salt water.

In order to ensure that our plugs and receptacles remain in good working order, even after long-term use in an aggressive atmosphere, we have provided the plug pins with a high-grade nickel plating. All other exterior metal parts are made of high quality stainless steel. It goes without saying that the enclosures are made of corrosion-free, extreme temperature conditions and impact resistant plastics.

Short circuit protection

It's better to be on the safe side – should a fault occur in the connected electrical apparatus, the plug and socket must maintain the explosion protection. No problem, because, in conjunction with an external back-up fuse that can be so generously rated that during the normal start-up of a three-phase current motor with separate thermal protection no tripping occurs, the explosion protection and the function of the switch are not affected, even in the event of a direct short-circuit.

Switching under full capacity

Functionality even at the top-end. The integrated interlocked switch warrants not only a voltage free connection of the contacts but also an AC-3 motor switching capability. Meaning even when you plug in an appliance that is switched on, you have no problems. This means that even electric motors can be switched on and off and up to full capacity without damaging the interlock switch.

Well connected

Practice shows that a hundred percent electrical connection is not the only feature marking a high-quality plug and socket system. In particular, in the often very harsh industrial environments mechanical strength is of great importance. In addition to a good electrical connection, the patented plug-in-and-turn switching of the plug and socket also guarantees a rugged mechanical connection. Even if you pull hard, it won't come apart. The integrated switch is giving an easy to clean design too and offers the possibility to design and integrate the 16 A & 32 A receptacle into nearly any ex-e enclosure.

Auxiliary contacts are a fine thing.

With them, you can hand-on selective messages. For example during a routine maintenance, when you want to know which plug sockets are momentarily in use. The auxiliary contact can be fitted in all 4- and 5-pole wall sockets, also at a later date.

CEE plugs and receptacles

A first step towards creating an international standard for industrial plugs and receptacles was taken with the IEC 60309 and CEE Publication 17, "Requirements for Plugs and Receptacles for Industrial Use".

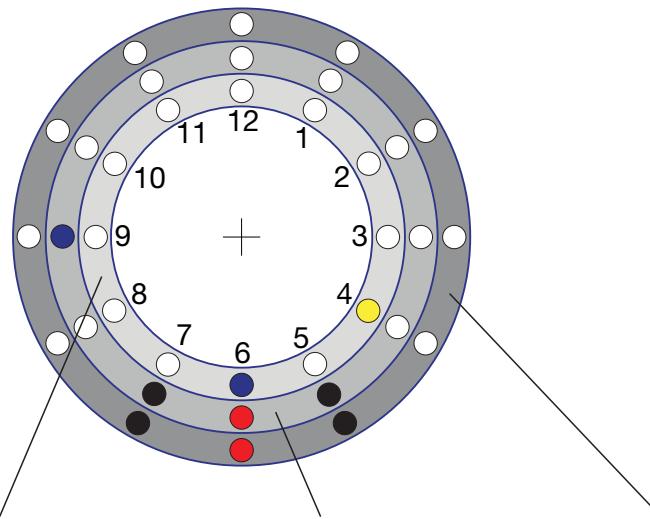

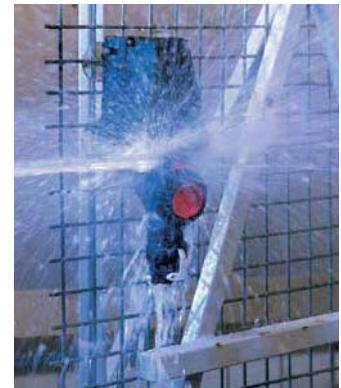

"IEC" stands for
"INTERNATIONAL ELECTRICAL COMMISSION".

When selecting plugs and receptacles from the existing ranges for standardization, preference was given to round plugs and receptacles, as the contact-making insert can be arranged in various positions (hours of day). This allows a high degree of differentiation of plugs and receptacles with regard to the various types of currents, voltages, frequencies, etc.

High ingress protection

The new plugs and receptacles reliably supply electrical power, even under the most difficult circumstances. From minus 20°C to plus 55°C there are no problems due to the ingress of water or dirt, because when the plug has been withdrawn, the sockets and

couples fulfil the requirements for the degree of protection IP66; and thanks to the type of bayonet ring, the degree of protection IP66 is also ensured when the plug is inserted and energized – we have tested it!

Overview Ex-plugs and receptacles

1

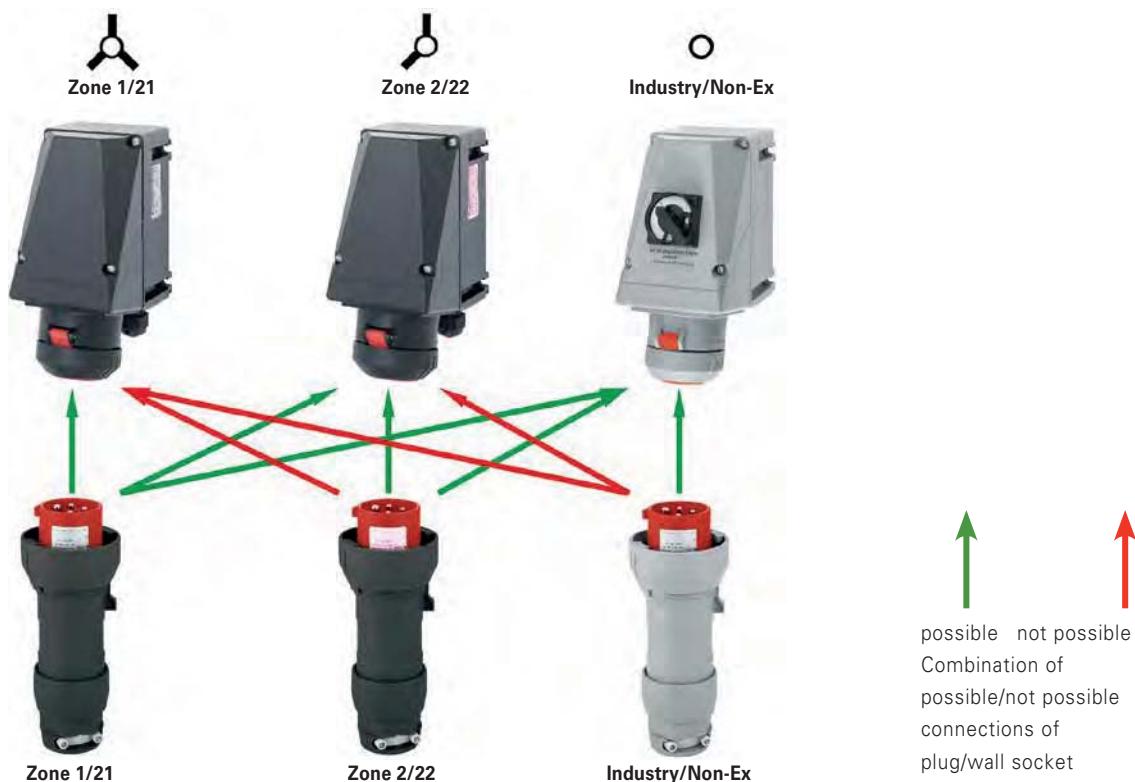

The key to safety

Plugs and receptacles with a cleverness: The innovative coding of apparatus allows plugs used for Zone 1 to be used in receptacles for Zone 2 and/or for usage with industrial receptacles as well. Hence, plugs and receptacles for Zone 1 can be used anywhere. However, by the same token, the coding ensures that Zone 2 plugs cannot be operated in sockets with Zone 1 coding. That guarantees safety with an enormous flexibility in their usage. Speaking of flexibility: It goes without saying that the plugs of the existing range also fit into the new receptacles.

Coding of the plugs and receptacles

What is eXLink?

eXLink is a complete system for connecting and disconnecting products electrically. This system is available in different versions for different applications: 4-pole, 4-pole + PE, 6-pole + PE and 7-pole.

It is necessary to distinguish between active components (couplers/receptacles) that, due to the design of the live parts (contact sockets in IP 30), can also be live when open, and passive components (plugs/inlets) that, due to the exposed plug pins, must not be live.

A solution for every environment

Depending upon the field of application, the components of the **eXLink connector system** are available in different versions:

- **Moulded plastic**

The material used is a heavy-duty, impact resistant polyamide that, even in the event of extreme fluctuations in temperature, retains its high material properties.

- **Nickel-plated brass**

The use of this material has been proven very successful for inlets and receptacles in flameproof apparatus. Thanks to its insensitivity to severe ambient conditions, it is particularly well suited for use in atmospheres with a particularly high content of harmful and aggressive substances.

- **AISI 316L stainless steel**

This material is used if aggressive environmental influences, such as salt water, acids, alkalis, place particularly high demands on the corrosion resistance and mechanical stress of a component. Stainless steel receptacles and inlets are also used for the connection of flameproof apparatus.

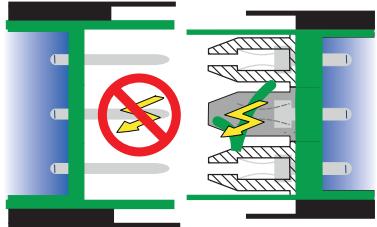

- **Option for the connection of armoured cables:**

In order to be able to provide a solution for the connection of armoured, braided or screened cables, we have developed a metal version with a universal armouring clamp. This allows the use of many commonly used armoured cables. An external strain relief provides protection against strong external forces. This solution is available in nickel-plated brass and stainless steel for plugs and couplers.

- **Threads:**

The 4-pole and 4-pole + PE inlets and receptacles feature an integral M20 or NPT 1/2" thread.

The 6-pole + PE and 7-pole inlets and receptacles have an integral M25 or NPT 3/4" thread. NPT-metallic only.

Components

Different applications need individual solutions, who can be reached by the combination of well-suited components.

- **Plug:**

Suitable as a cable end – with plug pins (in line male cable connector), must not be live when disconnected (**passive component**).

- **Connector:**

Suitable as a cable end – with contact sockets (in line female cable connector), can be live when disconnected (**active component**).

- **Receptacle:**

Suitable for installation with thread in products – with contact sockets (female), can be live when disconnected (**active component**).

- **Inlet:**

Suitable for installation with thread in products – with plug pins (male), must not be live when disconnected (**passive component**).

- **Elbow:**

90° elbow to facilitate installation of an inlet or a receptacle into a device when it is not possible to lay the cables in a straight line. The direction of the elbow can be aligned in 12 directions (30° turns).

- **Locking device:**

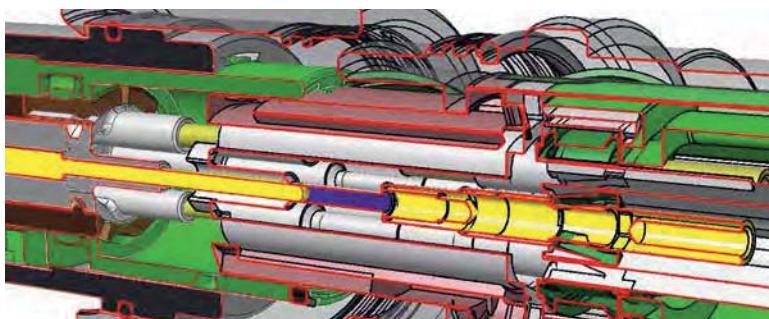

A two-part system which, when **eXLink** is installed on the connector/inlet, plug/receptacle or connector/plug, allows a padlock to be attached to prevent **eXLink** from being disconnected by unauthorised person.

- **eXLink Mining:**

eXLink Mining is a separate approved connecting and disconnecting electrical equipment for use in fire-damp environment in underground mining – without tools. With connectors for armoured cables approved for operation in areas where there is danger of fire damp you can connect lamps, indicators, sensors, motors etc. with a current consumption of up to 16 A easily by plugging.

Function

The self-cleaning Ex-e multi-contact conducting pins provide permanent faultless electrical connection. To ensure that the contact system remains fully functional even during long-term use in aggressive environments all conducting pins are silver-plated. The quality of the connection means that the system is suitable for current in the mA range up to 16 A continuously.

Coding

Male and female connectors are coded using a similar timetable according IEC 60309 standard, where voltage and current types have their own „time of day“ to ensure that the correct connection is made.

3-/4-pole:

- 2 h Bus connections
- 4 h 110 V AC 2-pole + PE
- 5 h 24 V AC 4-pole + PE
- 6 h 230 V AC 2-pole + PE
- 8 h 24 V DC 4-pole
- 10 h 230 V AC 4-pole + PE
- 12 h 24 V AC 2-pole + PE

6+1-pole:

- 4 h 110 V AC 6-pole + PE
- 6 h 230 V AC 6-pole + PE
- 8 h 24 V DC 7-pole
- 10 h 400 V AC 6-pole + PE
- 12 h 24 V AC 6-pole + PE

However, individual combinations can also be coded if required by customers.

The time code can be read on the connector. The location of PE/PA in relation to the keyway determines the name (e.g. 6 h = PE/PA bottom). By the time-setup it is protected to connect apparatus to the wrong outlet.

Connection types

The eXLink is available in two connection types:

• Crimp connection

The conductors are crimped directly into the contact pins. The crimp connection is suitable for all cables from 0.25 mm²- 0.5 mm², 0.75 mm² - 1.5 mm² or in a third version for 2.5 mm².

Smaller cables can be soldered.

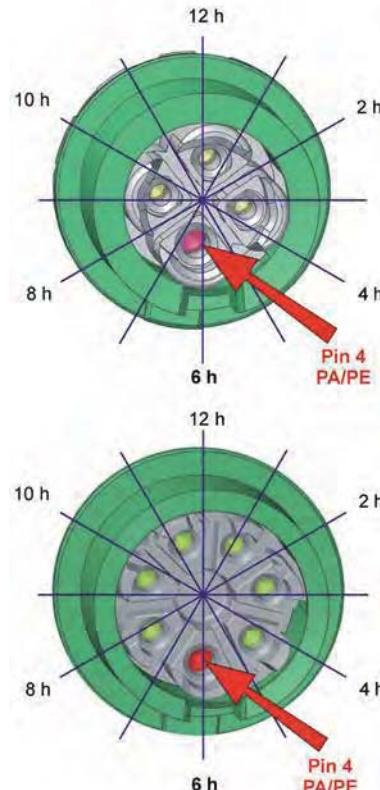

• Cage clamp terminal

This solution allows conductors between 0.5 and 1.0 mm² to be installed easily as the conductors do not have to be crimped into the contact pins. All plugs and couplers up to and including the 4-pole version can be delivered with cage clamp

terminals. The 6-pole+PE and the 7-pole versions are available as cage clamp versions too.

Extended ambient temperature range

The system is approved for a standard ambient temperature range of -55 °C to +75 °C. The use of moulded plastic versions is restricted in mechanical strength from -55 °C to -25 °C. Above +40 °C up to +75 °C the rated current have to be decreased.

1.1

GHG 51 Ex-Plugs and Receptacles 10 - 125 A

1 Plastic version for Zone 1, 2, 21 and 22

A good connection

Providing electrical energy there, where it is most needed – even in hazardous areas for the Zones 1, 2, 21 and 22.

Non-stationary electrical apparatus have generally high requirements on the energy/power supply. Robust plugs and receptacles as well as a high chemical resistance are at the first glance very important. Electrical reliability is a must not only for all connectivity products.

A high safety standard, a steady hold and faultless contacting even under vibration or the effects of an aggressive atmospheric environment are the basis for a secure and reliable utilisation.

CEAG plugs and receptacles offer more, apart from the proven technology, this product series is defined by its innovative details. For example, the very efficient cable strain relief or the coding system of the various versions offers different solutions for a secure and problem free utilization in all areas. Just to round the product off, the user in the normal industrial sector becomes exactly the same product advantages.

Robust industrial versions fulfil all requirements appertaining to mechanical and chemical durability. For the stationary repair power supplying in hazardous explosive areas, there is a specially conceived version available that fulfils all the necessary safety requirements. Used in a module sense, individual solutions are no problem at all.

The CEAG wall socket for instance can be mounted on to the pre-installed mounting frame without having to use tools – installation without a hot work permit.

Apart from the plugs and receptacles for the European market, we also have plugs and sockets extra for the US market, which are in accordance to all of the necessary standards UL and safety protection systems used there. The available standard range used here, are the 20 A, 30 A, 60 A and 100 A.

Features

- Nickel-plated contacts
- Low insertion force
- Safety standard IP66 applies also in the plugged-in state
- Full AC-3 switching ability
- Self-cleaning lamellar contacts, low transition resistance
- All-pole on/off switching
- Easy plugging

Rated voltage secondary	12 V, 24 V, 36 V, 42 V or 230 V~
Frequency	50 - 60 Hz
Power consumption	max. 65 VA
Back up fuse, internal	0.5 A mT, replaceable
Connecting terminals	1 x 1 - 4 mm ²
Protection class	I
Degree of protection accd. to EN 60529	IP54
Cable entry	Ø 10 - 20 mm
Enclosure material	glass-fibre reinforced polyester, polyamide

GHG 51 Ex-Wall Sockets with Stainless Steel Enclosure

1 From 16 A - 125 A for zone 1, 2, 21 and 22

A reliable connection

Making electrical energy available, where it is needed, in highly combustible ranges of the zones 1, 2, 21 and 22 is a substantial task. In addition to high mechanical protection and the ability to withstand aggressive environmental influences is also required. Our ranges of wall sockets with

our new stainless steel housing are the best choice.

Our durable and long-lasting GHG 51 series, with the high mechanical and chemical stability of the stainless steel housings are combined here, as well as generously dimensioned connection area with Ex-e connecting terminals perfect the new series.

Features

- Robust & durable enclosure made of stainless steel AISI 316L
- Increased resistance against chemicals, salt water and higher impact conditions
- Easy to clean design
- High ingress protection IP 66 applies also in the plugged-in state
- Full AC-3 switching ability
- Compatible with existing and proven GHG 51 plugs
- Easy looping options w/o using of junction boxes (16A-125A)
- External earth bolt to connect ground
- Panel mounting possibilities

GHG 51 Ex-Wall Socket with RCD/MCB

1 Enclosure solutions with RCD/MCB (RCBO) 16 A up to 32 A for zone 1, 2, 21 and 22

Customized protection

The new explosion-protected wall sockets with integrated protective device allow the local, customized protection of the connected equipment.

Especially in industrial environments with their numerous sources of danger, the protection of persons always comes first. Here, an RCD/MCB that is connected directly upstream from the end consumers is the optimal solution.

With a tripping current of 10- 500 mA, it provides safe protection against serious injuries due to an electric shock in the event of a fault of the connected equipment. With the built-in RCD/MCB, the feed line and the end unit can be protected individually to suit the required load.

Local safety

With the new RCD/MCB sockets even individual work areas can be isolated with utmost precision while maintenance work is carried out. In case of a fault, only the area affected is switched off – all other areas remain fully functional! In addition, individual areas can be switched off manually and safeguarded against being switched on accidentally with the pad-locking facility.

Long cable length-no problem
The reason for the problems is that with increasing cable length the loop impedance increases. An increased resistance extends the release time of a circuit breaker (fuse) or cancels the protection effect. By using the RCD/MCB, integrated directly into the wall socket, the cable lengths are

shortened to the load and minimizes the circuit malfunction.

The RCD/MCB sockets allow direct, on-site access to the safety devices. As a result, you can act more flexibly and your reaction times are reduced drastically.

Proven technology

The concept of the new RCD/MCB sockets is based on our tried-and-tested RCD/MCB enclosure concept in conjunction with our robust flange sockets and the built-in Ex-d components that can be operated easily at any time via a hinged actuating flap.

Features

- **INew standard for Ex-wall sockets with personnel protection**
- **Standard-enclosure for various requirements**
- **Lockable actuating flap**
- **MCB 10 - 500 mA**
- **Product series for 16 A and 32 A rated current**
- **High ingress protection IP 66**

Light Metal Ex-Plugs and Sockets

1 16 A metal design for zone 1 and 2

Customized protection

The explosion-protected light metal plugs and receptacle devices can be used in the areas of Zone 1 and Zone 2 at no risk of explosion. Extremely harsh conditions of use in the hazardous area requires the devices to have highest mechanical strength. The explosion-protected CEAG plug and socket devices can be used to supply the appropriate energy to portable electrical equipment in these harsh conditions.

The robust plug and receptacle devices with high-quality cast aluminium housings can be connected to a large connecting room via explosion-proof conduits or explosion-proof screwed connections.

Flameproof enclosure

Unused flameproof threads for cable glands have to be closed with certified plugs.

The light metal plug and socket devices have an outside earthing connection.

The explosion-protected plug can be plugged into an industrial sockets if their contacts are executed according to IEC 60309. Connecting terminals are in an Ex-e chamber, all other parts are Ex-d protected.

Features

- Ex-d enclosure
- High mechanical, chemical and thermal resistance conduit
- Connecting technology

Ex-Plugs and Receptacles Plastic Version for Zone 2

1 16 A to 125 A

A good connection

Providing electrical energy there, where it is most needed – even in hazardous areas for Zone 2.

Non-stationary electrical apparatus have generally high requirements on the energy/power supply. Robust plugs and receptacles as well as a high chemical resistance are at the first glance very important. Electrical reliability is a must not only for all connectivity products.

A high safety standard, a steady hold and faultless contacting

even under vibration or the effects of an aggressive atmospheric environment are the basis for a secure and reliable utilisation

CEAG plugs and receptacles offer more, apart from the proven technology, this product series is defined by its innovative details. For example, the very efficient cable strain relief or the new coding system of the various versions offers different solutions for a secure and problem free utilization in all areas. Just to round the product off,

the user in the normal industrial sector becomes exactly the same product advantages. Robust industrial versions fulfil all requirements appertaining to mechanical and chemical durability.

For the stationary repair power supplying in hazardous explosive areas, there is a specially conceived version available that fulfils all the necessary safety requirements. Used in a module sense, individual solutions are no problem at all.

The CEAG wall socket for instance can be mounted on to the pre-installed mounting frame without having to use tools – installation without a hot work permit.

Apart from the plugs and receptacles for the European market, we also have plugs and sockets extra for the US market, which are in accordance to all of the necessary standards UL and safety protection systems used there. The available standard range used here, are the 20 A, 30 A, 60 A and 100 A.

Features

- Safety standard IP66 applies also in the plugged-in state
- Full AC-3 switching ability
- Self-cleaning lamellar contacts, low transition resistance
- All-pole on/off switching
- Easy plugging

Plugs and Receptacles Plastic Version for Industrial Applications

16 A to 125 A

Not explosion-protected, but proven CEAG quality

CEAG plugs and receptacles are not only robust, they are also very reliable. In the "normal" industrial environment plugs and receptacles are exposed to similar conditions (chemical and mechanical) as their explosion-protected counterparts. With the introduction of the plug and receptacle generation Crouse-Hinds has now a complete program for industrial usage.

Easy to install

The wall sockets can simply be clipped onto pre-installed mounting plates without having to use tools. These high quality plugs and receptacles warranty even in harsh industrial environments a safe and reliable utilization. The long years of experience in the explosion-protection field has naturally contributed to this new plug and receptacle generation.

Degree of protection: IP66

Plugs and receptacles of the 16 A to 125 A range fulfil (even when they are plugged-in) the high safety standard of IP66 and have as standard the maintenance-free and proven lamellar contacts. The variable cable entries in connection with the generously dimensioned connection terminals allow for an economical use.

Apart from the IEC 60309 Series I coded versions we also have coded versions of the Series II especially for the US and North American market.

Features

- High impact resistant
- Low engaging force
- Safety standard IP66 applies also in plugged-in condition
- Self-cleaning lamellar contacts, low transition resistance
- Fibre-glass reinforced polyester housings
- Interlocking switch

Ex-Repair and Maintenance Receptacles

1 16 A up to 63 A plugs and receptacles plastic version for zones 1, 2, 21 and 22

For maintenance, repair and upgrading work, appliances such as drills, welding transformers, hand grinders and such are needed but are not in accordance to the explosion-protection regulations.

To be able to use these appliances in the Zone 1, Zone 2, Zone 21 or Zone 22 explosion-protected areas a hot work permit has to be issued. For the duration of the repair or maintenance work, the environment

has to be free of all explosive hazardous atmospheres.

The CEAG explosion-protected repair and maintenance receptacles are in accordance to regulations that in parts require a stationary installation.

With the interlocking and lockable switch or the lockable cover the utilization of the repair and maintenance receptacles is selectively possible after a hot work permit has been issued.

The CEAG repair and maintenance receptacles with and

without an interlocking switch can be used with both industry and Ex-plugs. Interlocked repair and maintenance receptacles have an internal switch who prevents that a plug can be pulled out while power is on. The interlock is activated by turning the plug.

Repair and maintenance sockets without an interlocking switch have a red signal lamp on the top side of the housing showing the actual state of power.

Features

- Commercially available industrial apparatus can be used with a „hot work permit“
- Sockets with lamellar contacts for a secure connection
- Switch and/or socket cover are lockable
- High mechanical, chemical and thermal stability

Ex-Repair and Maintenance Receptacle Distribution

1 40 A and 80 A distribution plastic version for zones 1 and 2

Maintenance procedure

For maintenance, repair and upgrading work, appliances such as drills, welding transformers, hand grinders and such are needed but are not in accordance to the explosion-protection regulations.

To be able to use these appliances in the Zone 1 or Zone 2 explosion-protected areas a hot work permit has to be issued. For the duration of the repair or maintenance work, the environ-

ment has to be free of all explosive hazardous atmospheres.

The CEAG explosion-protected repair and maintenance receptacle distributions are in accordance to regulations that in parts require a stationary installation. With the interlocking and lockable switch the utilization of the repair and maintenance receptacle distributions is selectively possible after a hot work permit has been issued.

All sockets are equipped with high quality switches and RCDs and have separate MCB's.

Repair and maintenance sockets have a red signal lamp on the top side of the housing showing the actual state of connection.

Features

- Industrial electrical devices can be used with a „hot work permit“
- Sockets with lamellar contacts for secure connection
- Lockable switch with all-pole switching and AC-3 motor switching capability
- High mechanical, chemical and thermal resistance
- Sockets can be locked separately

Ex-Portable Multi-Outlet Distributions and Cable Reels

1 16 A and 32 A for Zone 1 and Zone 21

Flexible power connection

Electrical equipment, such as pumps, scales, etc. can be used flexibly in areas of Zone 1 and Zone 2 that are at risk of explosions, they can be safely supplied with energy by means of portable CEAG multi-outlet distribution units or cable reels.

The multi-outlet distribution units are equipped with flange-mounting socket outlets that even comply with the high degree of protection IP66 when they are plugged in.

This means that this distribution units are also suitable for use in the harshest industrial conditions.

The portable, explosion-protected cable reels can be used to supply electricity flexibly to portable electrical equipment to areas of Zone 1 and Zone 2 that are at risk of explosions. Furthermore, the cable drum can be used as a multiple socket outlet. Different combinations of plugs and receptacles allow variable deployments. The cable

drum with a stainless steel housing comprises up to three explosion-protected flange-mounting socket outlets as well as the wound cable with a plug. One bolt each for inner and outer connection to the side wall are also welded on for connection to the protective conductor or potential equalisation conductor. Optionally, the cable reel can also be supplied with conductive reels.

A version of all-rubber design for use in harsh areas offers various applications. The small design gives best opportunities to be stored in operation vehicles or container.

All portable distributions are for use by:

- fire brigades
- civil defence
- rescue services
- police
- maintenance operation

Features

- High IP 66 protection
- Portable distribution of electricity via sockets in the area at risk of explosions
- Mechanical, chemical and thermal resistance
- Variable socket combinations
- Easy handling even with gloves

Ex-Protected Portable Power Supply Units

1 16 A – 125 A for Zone 1

Mobile power supply everywhere

Special requirements apply for power distributions for the use and operation of portable equipment in hazardous areas in Zones 1, 2, 21 and 22. It is necessary to ensure that any external mechanical influences are effectively kept away from the equipment.

CEAG explosion-protected power distributions fulfil these high mechanical explosion protection requirements by means of a high-strength protective

framework made of stainless steel (1.4301) and enclosures that have been specially developed for this purpose.

Whether in accordance with customer requirements or as a series product, sizes 16 A – 125 A are possible. All the electrical outgoing circuits can be fitted with separate MCBs or RCDs. Customized components, such as electronic sub-assemblies, can also be safely built into special, flameproof enclosures with the required Certificate of Conformity.

Degree of protection

The power distributions are fitted with flange sockets that fulfil the high requirements of the degree of protection IP 66, even with plugs inserted.

Thus, these distributions are even suitable for use under most extreme industrial conditions.

For the additional connection to the protective conductor (PE) or equipotential bonding conductor (PA), there is a stud welded directly onto the framework.

Features

- Flexible power distribution in the hazardous area thanks to sockets with lamellar contacts for optimum contact safety
- Padlocking of switch with all-pole disconnection and full AC-3 switching capacity
- High mechanical, chemical and thermal resistance
- Customer specific design

Fl-Ex Power Cords

1 Electrical connection technology zone 1/21, 2/22 and industrial applications

A perfect connection

Providing electrical energy there, where it is most needed – even in hazardous areas for the Zones 1, 2, 21 and 22.

To be on the safe side

Non-stationary electrical apparatus have generally high requirements on the energy/power supply. Robust plugs and receptacles as well as a high chemical resistance are at the first glance very important. Electrical reliability is a must not only for all connectivity products. A high safety standard, a steady hold and faultless contacting even under vibration or the effects of

an aggressive atmospheric environment are the basis for a secure and reliable utilisation. CEAG plugs and receptacles offer more, apart from the proven technology, this product series is defined by its innovative details. For example, the very efficient cable strain relief or the new coding system of the various versions offers different solutions for a secure and problem free utilization in all areas.

Use our competence - even in industrial environment

Our new range of Fl-Ex Power Cord contains not only explosion protected connection technology.

Fitted by the same high level features, our connection technology range is also available for industrial use. Our robust plugs and receptacles for industrial use fulfills the highest standards in mechanical and chemical resistance.

Ex power cord - the comfortable solution

For the individual connection of electrical apparatus by connectors we developed a wide range of power cords for use in hazardous areas as well as for industrial applications. By use of Fl-Ex Power Cords, electrical apparatus can be powered with energy flexible and safe.

Features

- Nickel plated contact elements
- Easy plugging
- Optional mechanical interlock
- High degree of protection IP 66, even plugged
- Glove operation
- Lockable against unauthorized use

Technical data

Plug and receptacles for industrial application (industrial standard)

Permissible ambient temperature	-20 °C to +40 °C / -45 °C to + 45 °C (optional) ¹⁾
IK-class according to EN 50102	IK 10 / 20 J
Rated voltage	3-pol.: 400 V / 4-/5-pol.: 690 V
Rated current	16 A / 32 A / 63 A
Frequency	50/60 Hz
External back up fuse	without therm. protection: 16 A / 32 A / 63 A
Protection class	I
Degree of protection accd. to EN 60529	IP 66
Enclosure material	Polyamide

Plug and receptacles for Zone 1/2, 21/22

eXLink® - the Miniature-Power Connector

1 eXLink 4-pole/4-pole + PE - 10 A for Zone 1 and Zone 21

From BUS-technology to 10 A

Providing flexible power supply and BUS-connection there, where it is needed – even in hazardous areas for the Zones 1, 2, 21 and 22.

The eXLink 4-pole/4+1 pole is a complete system for connecting and disconnecting products electrically. Supplying from low voltage BUS signals up to 250 V AC / 10 A electrical power the full range of connectors and receptacles are available with moulded plastic enclosure as well as nickel-plated brass or stainless steel enclosures.

Time code for safety

A time coding, following the IEC 60309 system secures from misconnections of non-compatible voltage levels. Only connectors and plugs with the same voltage level can be plugged together.

Proven connectivity

The well-known and reliable bonding technique "crimp connection" for wire size of 0.25 mm² up to 0.5 mm², 0.75 mm² up to 1.5 mm² and optional 2.5 mm² is used for wire connection to the pins. Additionally a screw-less technique "cage clamp" can be used for selected types.

A special plug and connector for the use of armoured cable with armouring diameter up to 1.5 mm is available.

The Receptacle and the Inlet are equipped with metric thread M20 x 1.5 or 1/2" NPT thread to screw directly into electrical apparatus. The factory potted metal versions can be used directly into Ex-d enclosures without additionally certification to be applied.

No "Hot Work Permit"

All eXLink plugs, inlets, receptacle and connectors are designed for hot swapping of apparatus in hazardous areas without disconnecting terminals, without shutting down circuits and without a "hot work permit"!

Features

- Hot swap
- Standard IP protection IP66/IP68
Permissible ambient temperature from -55 to +70 °C
- Up to 250 V 10 A
- Stainless steel or nickel plated brass enclosures for highest mechanical protection
- Max. 4 pole + PE connections
- World wide certifications
- Mining (EX I M2) certified

³⁾ on customers request

For customers who wants to configure the needed **eXLink** easily and fast Eaton's Crouse-Hinds Business offers via the Internet separate tool to select the right type and order No.: <http://exlink.internezzo.de/>

From a selection of nearly 2000 variants of eXLink connector products you will find **YOUR eXLink** product fast, reliable and easy using our product configurator

Crouse-Hinds
by EATON

Type	plug male - for passive cable connection
Material	plastic
Clock Setting / Voltage	6 h: 2-pol + PE - 230 V AC
Connection Technology	1,5 mm ² Crimp
Accessories	without locking device
Connector cable	cable diameter 7.5 - 11 mm

GHG 571 7106 R0002

Crouse-Hinds
by EATON

Type	receptacle female - for active enclosure
Material	nickel plated brass
Clock Setting / Voltage	04 h: 6-pol + PE - 110 V AC
Connection Technology	configured with 1,5mm ² , potted
Accessories	without locking device
Connector cable	300 mm flying leads

eXLink®- Ethernet/USB

1 eXLink 4-pole + PA for Zone 1 and Zone 21

Ethernet/USB in hazardous environment

The inlets and receptacles **eXLink** Ethernet and **eXLink** USB extend the proven connector series **eXLink** for hazardous areas. They can be used for plug-in connection for industrial LAN/Ethernet and USB applications with each other in areas with an explosion hazard. The normally used electrical isolation of an intrinsically safe interface is no longer necessary. The Ex-de technology of the connectors allows the use of full industrial Ethernet power without barri-

ers. This increases the efficiency of the bus architecture and reduces the susceptibility to faults and therefore the costs.

The sockets of the inlets and receptacles designed with Ex-de degree of protection have the proven CEAG contacts of shutter-like, punched and specially treated copper-beryllium band which provides a perfect electrical connection continuously with its large number of contact points. An Ex-d space around each plug pin provides a reliable ex-d chamber for explosion protection during connection and disconnection of the connectors

in zones 1, 2, 21 and 22. To rule out incorrect assignment, the inlets and receptacles are coded according to time similar to the IEC 60309 system.

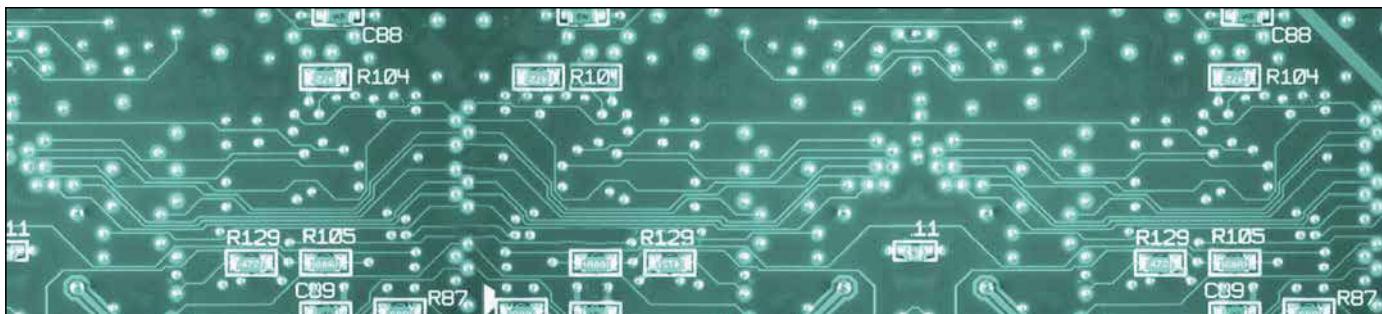

In accordance with the requirements of a contemporary, safe and time-saving assembly, all the components are equipped with earthing cables, cable stub and pre-assembled RJ plug male/female or USB plug male/female.

With the M20 screw-in thread the nickel-plated brass components (optionally stainless steel) can be integrated in all flameproof design enclosures, allowing the use of industrial Ethernet cards/instruments inside without limits.

Features

- Hot swap
- Compact design
- High degree of protection IP66 / IP68
- Simple assembly
- Frequency range up to 100 MHz or USB 2.0
- Transfer rate up to 100 MBaud (Ethernet)
- Available for 10 BASE-T, 100 BASE-T

Innovative connectors for Ethernet systems

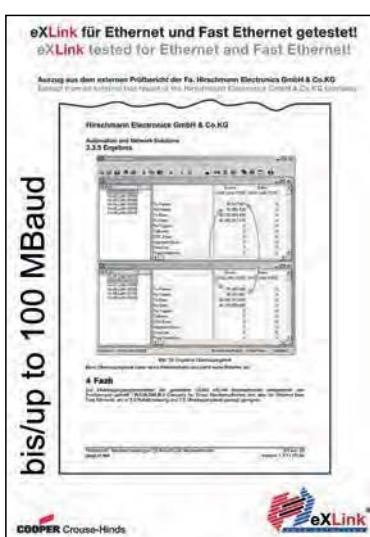

Combine the safety of an innovative explosion-protected connector system with the advantages of a homogeneous communication structure between the host, control and process level! With eXLink Ethernet and eXLink

USB you can also use efficient, Ethernet-based communication systems in the hazardous areas. This enables you to use a modern information architecture at the same time as efficiently satisfying all criteria for explosion protection.

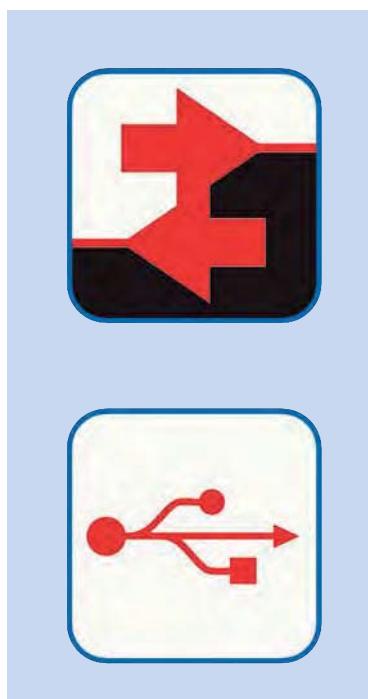

Conventional field bus systems are designed exclusively for data communication with the process and production control. With Ethernet as a communica-

cation medium you can implement a homogeneous infrastructure from the host level via the control level to the process level. In the industrial environment, **eXLink** connector systems replace the familiar connectors of the IT office world. Therefore this systems also offers you the real time performance of Ethernet networks – hot swap – in addition to high safety standards in areas with an explosion hazard. Adapt your control to the changing production processes. Child's play with **eXLink** connectors because Ethernet components and explosion protection have a modular structure. This means that you can update your information architecture without having to change your explosion-protected installation by simply changing the components in their pressurised enclosures. You can use conventional industrial components because the explosion-protected connection to your network is provided by the **eXLink** installed in the enclosure which also enables hot swapping of your terminating equipment without isolating and without hot work permit. The **eXLink** also put your data transmission on the safe side. Independent measurements of a well-known laboratory have classified the use of the **eXLink 4-pole + PA** up to

100 MHz and with transfer rates up to 100 Mbaud according to the requirements laid out in TIA/EIA-568-B.2 Category 5e as safe. The **eXLink** **4-pole + PA** system can therefore be used in **Fast Ethernet®** or **Ethernet®** networks as well as for the implementation of explosion-protected USB interfaces such as hard disk driver.

eXLink® - the Miniature-Power Connector

1 eXLink 7-pole / 6-pole + PE - 16 A for Zone 1 and Zone 22

From BUS-technology to 16 A

Providing flexible power supply and signal – connection there, where it is needed – even in hazardous areas for the Zones 1 and 2.

The **eXLink** 7 pole / 6-pole + PE is a complete system for connecting and disconnecting product electrically. Supplying from low voltage BUS signals up to 400 V AC / 16 A electrical power the full range of connectors and receptacles are available with moulded plastic enclosures as well as nickel-plated brass or stainless steel enclosures materials.

Time code for safety

A coding system following to IEC 60309 system secures from misconnections of non-compatible voltage levels. Only connectors and plugs with the same voltage level can be plugged into.

Proven connectivity

The well-known and reliable bonding technique "crimp connection" for wire size of 0.75 mm² up to 1.5 mm² and optional 2.5 mm² is used for wire connection to the pins. Additionally a screw-less technique "cage clamp" can be used for selected types. A special plug and connector for the use of armoured cable is available.

The Receptacle and the Inlet are equipped with metric thread M25 x 1.5 or 3/4" NPT thread to screw directly into electrical apparatus. The factory potted metal versions can be used directly into Ex-d enclosures without additionally certification to be applied.

No "Hot Work Permit"

All **eXLink** plugs, inlets, receptacle and connectors are designed for hot swapping of apparatus in hazardous areas without disconnecting terminals, without shutting down circuits and without a "hot work permit"!

Features

- Hot swap
- Standard IP protection IP66/IP68
- Permissible ambient temperature from -55 to +70 °C
- Up to 400 V 16 A
- Stainless steel or nickel plated brass enclosures for highest mechanical protection
- Max. 7-pole (6-pole + PE) connections
- Mining (EX I M2) certified

Miniature electrical connectors for mining

Connecting and disconnecting electrical equipment in underground mining – without tools, without switching off and without hot work permit – is a decisive step into a future where the assembly, maintenance and repair of electrical equipment can be handled simply, safely and at low cost. With connectors for armoured cables approved for operation in areas where there is danger of fire damp you can connect lamps, indicators, sensors, motors etc. with a current consumption of up to 16 A easily by plugging.

For example, lamps connected via **eXLink** can be serviced or changed at any time without having to switch off the entire lamp line. Actuators and sensors with **eXLink** connection can be changed quickly and safely at any time. Components of large machines can be changed easily by plugging and with the **eXLink** 6+1 any current consumers with 3 phases up to 16 A, PE and 2-wire control cable can be connected by just one small plug.

The plugs and coupler of the **eXLink** series designed in Exde type of protection are handy and small. The sockets have the proven CEAG contacts of shutter-like punched and specially

treated copper beryllium strip which provide a continuously perfect electrical connection with the large number of contact points.

An Ex-d space around the plug pins provides reliable explosion protection in fire damp hazard areas when connecting and disconnecting the apparatus. The plugs and sockets can be coded similarly to the CEE system. Depending on the area of application you can choose between the versions 4-pole plus PE (**eXLink** 4+1) or 6-pole plus PE (**eXLink** 6+1). Housing material is available in AISI 316L.

According to the requirements of a modern, reliable and time-saving assembly, all components are designed without screws and are available with crimp and spring terminal types.

Quick connection and disconnection in areas where there is a risk of fire damp

Secure electrical and mechanical connection in compact housings

- No switching off and disconnection necessary
- Reduction in downtimes
- Maximum type of protection IP 66/IP 68
- Wide operating temperature range
- Infinite flexibility due to different versions and codings
- Reverse polarity protected connections by coding

Pre-Assembled Branching/Terminal Boxes

1 eXLink technology combined with terminal boxes for Zone 1 and Zone 21

Safe costs for installation and maintenance

Each user can enjoy the benefits of the **eXLink** with the pre-assembled branching boxes without having to first perform additional wiring work.

Typical applications such as energy distribution, power supply for modules or bus technology can be performed at a reasonable price. For example, a control unit can be quickly and safely connected to a pre-assembled **eXLink** branching box and disconnected using **eXLink** plugs, leading to cost and time savings during service- and repair work. An additional switch is no longer required.

All connectors can be plugged or disconnect during operation ("hot swap").

If terminal boxes are used for distributing bus cables, these can also be plugged during operation „hot swap“ with **eXLink**. No re-boot or shutdown of the system is necessary. This makes diagnosis or re-configuration much easier. There is no need to waste time isolating devices, and possibly having to shut down a machine in the process.

Cables made to your requirements

Cables with **eXLink** plugs and coupler can be ordered ready made according your requirements in different lengths and versions. This is a tremendous cost reduction factor for your commissioning of the system. You can plug together all necessary bus lines, power supply systems and monitoring lines without commissioning of cables, terminals and connectors. No additional cost for re-assembling of cables, re-wiring of connections and testing procedures will arise.

Features

- Hot swap
- Customized solutions
- Pre-assembled eXLink connectors wired on terminals
- for all standard connection types up to 7-pole
- Nominal current up to 16 A per connector
- Compatible with Ethernet® and Fast Ethernet®-Bus

Ordering details

Coding	Components	Cable gland	Terminals	Order No.
Ordering details for ready made, prewired terminal boxes GHG 791 01				
02h / 08h	1 x flange socket GHG 571 8102 R300x 1 x flange socket GHG 571 8108 R300x	2 x M20	8 x 2.5 mm ² 1 x PE/PA	GHG 791 0101 R5226
BUS 02h	1 x flange socket GHG 571 8102 R000x	2 x M20 1 x M20 screw plug	4 x 2.5 mm ² 1 x PE/PA	GHG 791 0101 R5227
BUS Ethernet 01h	1 x flange socket GHG 574 8101 R000x 1 x plug (enclosed) GHG5747101R0001	1 x M12	2 x 2.5 mm ² 1 x PE/PA	GHG 791 0101 R5228
Ordering details for ready made, prewired terminal boxes GHG 791 02				
230 V AC 06h	3 x flange socket GHG 571 8106 R 000x	1 x M25	5 x 2.5 mm ² 2 x PE/PA	GHG 791 0201 R5001
24 V DC 08h	1 x flange socket GHG 571 8108 R000x	1 x M20 Ex-i	12 x 2.5 mm ² 1 x PE/PA	
24 V DC 12h	1 x flange socket GHG 571 8112 R000x			GHG 791 0201 R5002
230 V AC 10h	1 x flange socket GHG 574 8210 R000x	3 x M25	12 x 2.5 mm ² 2 x PE/PA	GHG 791 0201 R5003
230 V AC 10h	1 x flange socket GHG 574 8210 R000x	1 x M25 1 x M25 screw plug	4 x 2.5 mm ² 1 x PE/PA	GHG 791 0201 R5004
230 V AC 06h	2 x flange socket GHG 571 8106 R000x	2 x M20 trumpet shape 2 x M20 screw plug	6 x 2.5 mm ² 2 x PE/PA	GHG 791 0201 R5005
230 V AC 10h	2 x flange socket GHG 574 8110 R300x	2 x M25	8 x 2.5 mm ² 2 x PE/PA	GHG 791 0201 R5006
230 V AC 06h	2 x flange socket GHG 571 8206 R000x	2 x M25	4 x 2.5 mm ² 2 x PE/PA	GHG 791 0201 R5007
24 V DC 08h	1 x flange socket GHG 572 8108 R300x	2 x M16	12 x 2.5 mm ² 2 x PE/PA	GHG 791 0201 R5008
24V AC 12h	1 x flange socket GHG 571 8112 R000x 1 x flange socket GHG 572 8112 R000x	1 x M20 1 x M25	8 x 2.5 mm ² 1 x PE/PA	GHG 791 0201 R5009
24V DC 08h	1 x flange socket GHG 571 8108 R000x	1 x M16 Ex-i 1 x M16 screw plug 1 x M20 Ex-i	6 x 2.5 mm ² 1 x PE/PA	GHG 791 0201 R5011
Ordering details for ready made, prewired terminal boxes GHG 731 12				
24 V DC 8h	3 x flange socket GHG 571 8108 R000x	1 x M25 Ex-i	12 x 2.5 mm ²	GHG 731 1201 R5001
230 V AC 6h	1 x inlet GHG 574 9103 R000x	2 x M20		
230 V AC 10h	1 x inlet GHG 574 9110 R000x		8 x 2.5 mm ² 2 x PE/PA	GHG 731 1201 R5002
